CONTROL IT!
PROTECT IT!**

Secure Emails

Secure Documents

Secure Collaboration

www.galaxkey.com

Galaxkey Secure Workspace allows you to share sensitive and confidential information securely and easily.

By using Galaxkey Secure Workspace, you can team up with colleagues to edit, save and share sensitive information with the assurance that it is secure and encrypted – ensuring that the information that you share within your group remains protected.

TOP FEATURES

SECURE BY DESIGN

All files are scanned for viruses before they are uploaded and they are secured alongside the users identity by default. No file is insecurely stored. Files are not accessible without user access authentication.

QUICK DEPLOYMENT & EASY OPERATION

Within minutes Galaxkey Secure Workspace can be deployed and configured. Galaxkey works transparently in the background to relieve the organisation and users of any key management complexities.

COLLABORATE ONLINE

Galaxkey Secure Workspace allows real-time editing for Word, Excel and Powerpoint - multiple users can work on the same file at the same time and see others make changes to it.

VERSION CONTROL

Galaxkey Secure Workspace has built-in version control. So each time a file is updated or modified, the previous version is maintained in history. This means that you can revert to a previous version at any time.

REGION BASED HOSTING

Define and restrict access to one or more specific geographic regions.

OTHER FEATURES

Certified by

**National Cyber
Security Centre**

COMPLIANCE

- Meets legislative and industry compliance requirements, including GDPR. Maintains data privacy of personal and sensitive information, whilst keeping control of your data.

STANDARDS & REQUIREMENTS

- Files are secured using Galaxkey's Data Protection giving assurance that the data is protected independent of the hosting model.
- Galaxkey uses AES FIPS 140-2 compliant encryption which is the US government standard that defines a minimum set of the security requirements for products that implement cryptography. It is designed for cryptographic modules that are used to secure sensitive information. The encryption modules can be safely run only in FIPS enabled environments. The system uses 2048-bit RSA Keys. Higher grade protection is available if required.
- Galaxkey is CPA certified by the National Cyber Security Centre (NCSC)
- System requirements: Since Galaxkey is a cloud-based solution, it does not require additional hardware or software on your premises. Workspace works on all latest versions of a browser eg. Chrome, Safari, Edge, IE and Opera.

CONTROL

- File Size & File Format: Configure the file formats and file sizes that are permitted to be uploaded onto the Workspace.

- Control Third Party domains: Provide additional security by controlling who can be invited to work in your Workspace.
- Audit: Have complete accountability by monitoring all the changes and actions performed by members.
- Restrict Access Rights: Control access rights to Workspaces at an individual member level.
- On-Premise Option: You can install the server in-house and the files won't even leave your organisation.
- High level administrative control feature: Galaxkey provides a perfect solution for administrators to manage their keys and control their data.
- Single sign-on : A Single Identity is used for all devices to support access control. This option is available with Self Hosted Options.

CUSTOMISATION

- Workspace also gives you the ability to customise your notification emails and corporate branding
